Warning: It looks like you're using a minified copy of the development build of React. When deploying React apps to production, make sure to use the production build which skips development warnings and is faster. See <https://fb.me/react-minification> for more details.

You are currently using minified code outside of `NODE_ENV === 'production'`. This means that you are running a slower development build of Redux. You can use `loose-envify` (<https://github.com/zertosh/loose-envify>) for browserify or `DefinePlugin` for webpack (<http://stackoverflow.com/questions/30030031>) to ensure you have the correct code for your production build.

Warning: Accessing `PropTypes` via the main React package is deprecated, and will be removed in React v16.0. Use the latest available v15.* `prop-types` package from npm instead. For info on usage, compatibility, migration and more, see <https://fb.me/prop-types-docs>

Warning: Accessing `createClass` via the main React package is deprecated, and will be removed in React

.....
v16.0. Use a plain JavaScript class instead. If you're not yet ready to migrate, create-react-class v15.* is available on npm as a temporary, drop-in replacement. For more info see <https://fb.me/react-create-class>
